

How **SAFE** is your soap?

Did you know?

- New research shows germs on your hands can be transferred from washed hands to other surfaces²
- Washing with contaminated soap can leave more bacteria on your hands than before washing

The answer may surprise you.

Recent studies found:¹

- **25%** of refillable bulk soap dispensers contain unsafe levels of contamination
- Coliforms, illness causing fecal-based organisms, were found in **16%** of the samples

Bulk soap dispensers are open to the environment.

Germs grow inside because it isn't practical for maintenance personnel to properly clean and sanitize them each time they are refilled. New soap becomes tainted as it is added to contaminated soap.

MAKE THE SWITCH

Create a healthy environment with **GOJO® GREEN HYGIENE™ Solutions** featuring **SANITARY SEALED™** refills.

WHY SANITARY SEALED REFILLS?

The soap inside is protected from contamination because it is factory sealed and includes a fresh nozzle with each refill. **GOJO Green Certified Foam Soap** is the logical choice for proper hand hygiene.
